

Play Music	2.5: The user now could search for a specific song from the Music page, then play the song and the result should contain lyrics, album info and release date. The search page should have a nice UI as well.	2.0: Have a nice layout for the search result page. Include singer's description and album description. But the user could not play the songs.	1.0: Have a basic layout (very plain field, no animation)for the music page. No search and music play implementation at all.
Playlist	2.5: Have a button on the side of a song, and the user could hit the button and add a song in his playlist that is located on the profile page. The button should be easy to navigate. The playlist should have a nice UI.	2.0: User could add songs after hit the add button but playlist has a very basic UI	1.0: Have a basic layout (very plain field, no animation)for the playlist page. But add songs to playlist is not functional.
Following	2.5: The user now could follow other users. The following /follower page should have a list view show and the list should contain the basic info of the users such as date of birth etc.	2.0: Following and following page is clear but has very basic user interface. User could not easily navigate a button to follow a user or it does not show the basic info about the user.	1.0: Empty page and implementation is limited.

Search User	2.5: Manually create some user data in my database, which has the username, email and birth date. I will put the data online using myJson, then read the data using javascript. Now the user could search for a user to follow or unfollow. The search result should have a nice UI and a button for the user to choose if he wants to follow a specific user.	2.0: Write the API and put the API online. The json file should contain the user's basic information. Search is functional (should filter out the result) but follow and unfollow is not functional.	1.0: API does not have the basic information and is not online. Then the user could not search successfully for a specific user. Follow is not functional either.
Test	2.5: Selenium tests implemented for all the functionalities + manual test plans	2.0: Selenium tests implemented for all the functionalities	1.0 : only have manual test plans or only implemented some test cases
